A TRUSTED COMPANY

At Mapa Professional, our vision is that the hand protection industry is rooted in the absolute trust that users place in their gloves. We firmly believe this trust can only be built through permanent user-centric approach, effective innovation capacity and positive collaboration among all stakeholders.

Protecting millions of hands worldwide by mutualizing our expertise with our users, clients, and partners to develop and provide reliable and high-performing hand protection solutions.

Mapa Professional protects the most valuable hands in the world, yours.

A unique expertise, built on more than 45 years of experience, market knowledge and research and innovation capabilities.

We have a whole dedicated team to understanding our users' needs and to designing solutions suitable for use at workstations for most industries.

2 R&D centres in France and Malaysia
60 engineers and technicians

Integrated production
3 factories worldwide

1 Application laboratory

Reproducing real glove use conditions with internal tests going beyond regulatory standards (grip, durability, dexterity, contact heat).

1 Customer Technical Service

MAPA PROFESSIONAL introduces its

Corporate Social Responsibility initiative "Our Caring Actions"

Our long-term perspective centres around **a process of continuous improvement** to develop more responsible sourcing, mitigate our environmental impact and improve social standards with **concrete actions and specific goals**.

We are striving to meet our stakeholders' expectations whilst **working towards a greener future** in which we play an active role in terms of sustainability as we firmly believe that all our efforts, our caring actions for you, for us, no matter how big or small, once combined and multiplied, will have a positive impact.

EUROPEAN LEGISLATION AND STANDARDS

Regulation (EU) 2016/425

Why a PPE Regulation?

Protective gloves are PPE (Personal Protective Equipment) and must comply with the European Regulation 2016/425 in order to freely circulate within the European Union. The Regulation 2016/425 contains the requirements that PPE must satisfy to guarantee the health and safety of users. That means that PPE must protect up to the required levels without compromising the user's health. Harmonised European standards (EN 388, EN ISO 374-1...) are used in the certification process to assess conformity of the product to the requirements of the PPE Regulation in relation to the risks against which the product is intended to offer protection. The manufacturer must indicate the conformity of the product by CE marking it. He must also provide a EU declaration of conformity.

PPE Regulation (EU) 2016/425

This European Regulation was implemented on 21 April 2018. It replaced the European Directive 89/686/EC, which was withdrawn on this same date.

Regulation (EU) 2016/425 and Directive 89/656/EEC

Regulation (EU) 2016/425 stipulates the essential health and safety requirements for designing and manufacturing PPE, as well as the responsibility of manufacturers or importers and conformity procedures to affix the CE marking on PPE. Directive 89/656/EEC is dedicated to professional users of PPE. It lays down the responsibilities of employers to supply their employees with adequate CE-marked PPE and ensure their safe use.

CATEGORIES OF RISK AND CORRESPONDING CERTIFICATION PROCEDURE

- CAT 1
Minimal risks only. The manufacturer is responsible for the conformity of its products.
- CAT 2
Risks other than CAT 1 and CAT 3. CE-certificate of conformity obtained from a Notified Body.
- CAT 3
Risks causing irreversible damage to health. CE-certificate of conformity and conformity of the production from Notified Bodies.

Standards Highlights

ISO 18889:2019

Protective gloves for pesticide operators and re-entry workers

Protective gloves are classified into 2 categories:		
WHOLE HAND PROTECTION GLOVE		PARTIAL HAND PROTECTION GLOVE (fingertips and palm-side)
Relatively low potential risk	Higher potential risk	
G1 gloves  ISO 18889 Handling diluted pesticides. No mechanical risk.	G2 gloves  ISO 18889 Handling diluted or concentrated pesticides. Minimum mechanical resistance requirement.	GR gloves  ISO 18889 Re-entry worker who is in contact with dry and partially dry pesticide residues that remain on the plant after pesticide application. Mechanical properties that are required for several re-entry tasks. Breathable material in the back of the hand provides comfort.
Disposable gloves	Chemical gloves	High dexterity mechanical gloves

EN 407

Protective gloves and other hand protective equipments against thermal risks

The **EN 407** standard has been revised recently. The main reason for the revision is the **inclusion of thermal** protection articles for private use (oven gloves, potholders, etc) in the new **PPE Regulation (EU) 2016/425**

→ The performance levels remain unchanged!
The major change is the integration of a new pictogram.

STATIC ELECTRICITY

Standards dealing with electrostatic properties.

Working in ATEX zones or handling electronic devices both require gloves that are dissipative. Since there is no specific standard for ESD (electrostatic discharge) gloves, MAPA PROFESSIONAL follows the strict EN 16350 standard for ATEX gloves. Gloves that meet this standard are also suitable for handling electronic devices.

GLOVES STANDARDS REQUIREMENT	TEST METHOD	PICTOGRAM
ATEX environment EN 16350 Vertical resistance: <10 ⁸ Ω at 25% relative humidity <small>*The tests must be performed on 5 samples which must all pass the limit of vertical resistance</small>	EN 1149-2	Introduced in EN ISO 21420: 2020 NEW 
Protection of electronic devices from ElectroStatic Discharge (ESD)	No standard	No test method No pictogram

EN ISO 21420

- The **EN 420** standard was revised in 2020 becoming standard **EN ISO 21420**. The revised **EN ISO 21420** standard for protective gloves includes these key updates:
- **Innocuousness:** Limits on harmful substances like DMFa and PAHs in gloves.
 - **Electrostatic Properties:** New EN 16350 pictogram for gloves suitable in ATEX zones, with other electrostatic standards (EN 1149) still applicable.
 - **Glove sizing:** No minimum length requirement; sizes based on hand dimensions.
 - **Glove marking:** Must include manufacturing and obsolescence (if applicable) dates for traceability.
 - **Instructions for use:** Must provide detailed guidance on usage, hygiene, and warnings (with allergens listed upon request).

How to read the standards

The following pictograms can help you understand the performance characteristics of a glove:

MECHANICAL PROTECTION

MECHANICAL HAZARDS EN 388

UNDERSTANDING THE SPECIFIC FEATURES OF A GLOVE FOR AN INFORMED CHOICE

Different cuff edging depending on your use

Safety cuff
Wrist protection, quick glove removal and good ventilation of the hand. Perfect for jobs with a risk of entanglement.

Knitted cuff
Provides a good fit for the hand and protects the wrist

Straight cuff
Improved hand ventilation

Rolled cuff
Reduces the risk of tearing when doffing gloves

Scalloped cut
Longer service life for the glove

Shapes, sizes and thicknesses

Glove length
They must be chosen in accordance with the risks associated with the handling circumstances, to give more or less protection to the forearm. They generally vary between 22 and 60 cm.

Glove thickness
This influences the user's dexterity and the performance of the glove. Varies between 0.1 and 2.5 mm.

Glove size
This depends on the circumference of the user's palm, and varies from size 5 to 11. This affects usage comfort.

Size	XXS	XS	S	M	L	XL	XXL
	5	6	7	8	9	10	11
Wrist band color							

For most of our mechanical gloves, each color on the glove wrist band corresponds to a glove size.

Anatomical or ambidextrous gloves

Anatomical gloves
A glove is called anatomical when there is one shape for the left hand and another for the right.

Ambidextrous gloves
Ambidextrous gloves can be worn equally well on either hand; this is mainly the case for thinner gloves.

Various external finishes to suit your needs

Smooth
No marking of objects being handled

Reinforced grip
Excellent grip in wet environment

Non-slip embossed
Excellent grip in oily environments

Dot embossing
Improved thermal insulation

Pebbled
Good grip and minimal glove fouling

Optimal grip
Embedded grip for secure handling in dry and greasy environments

The different types of internal finish

Powdered
Makes it easier to don and doff gloves, without having to increase the thickness of the glove.

Chlorinated/Easy donning treatment
Makes it easier to don and doff gloves without increasing the thickness and without using powder. Reduces the allergy risk of natural latex gloves.

Flocked
Cotton-based textile fibres, covering the inside of the gloves. Fleeced feel comparable with that of a fine carpet. Good sweat absorption.

Textile support
Knitted interior, made from cotton or synthetic materials for increased comfort or specific performance. MAPA has developed an exclusive technology for manufacturing a glove with textile support. This improves comfort for the user. Use the «Ultracomfort» pictogram to locate this technology.

The different textile types

Cotton
Comfort, thermal insulation and sweat absorption.

Polyamide
Optimised dexterity (thin, seamless).

Para-aramid
Cut and heat resistance.

High density polyethylene
Cut-resistance and optimised dexterity.

UNDERSTANDING OUR TECHNOLOGIES

MAPA TECHNOLOGIES

ADVANCED GRIP TECHNOLOGY

Embedded optimal grip to safely handle tasks in dry & greasy environments

GRIP & PROOF TECHNOLOGY

Excellent grip in oily environments combined with liquid-proof protection in palm area

RESICOMFORT TECHNOLOGY

Comfort and allows hand to breathe without compromising durability

ADVANCED GRIP TECHNOLOGY

Our **ADVANCED GRIP** technology offers an embedded optimal grip to safely handle tasks in **dry & greasy environments**

Embedded patterns providing high-performance grip

GRIP

Embedded patterns to:

- Reduce hand fatigue: less effort when gripping objects in dry & greasy environments
- Enhance safety: secure grip that helps reduce the risk of injuries caused by slipping or dropping objects

RESISTANCE

- Chemical protection against a wide range of chemicals such as alcohols, hydrocarbons, oils & greases
- Contact heat resistance due to the high quality cotton-knit liner

COMFORT

- Supply gloves providing ease of movement
- Good fingertips sensitivity

Thanks to our expertise and reliable use testing, MAPA PROFESSIONAL has designed two ideal gloves with secure grip & chemical protection using **ADVANCED GRIP** technology, for safe work in **dry & greasy** environments. This technology is used in our **ULTRANITRIL 358 & 458**.

ULTRANITRIL 358

Automotive assembly

ULTRANITRIL 458

Chemical blending

GRIP & PROOF TECHNOLOGY

Our **GRIP&PROOF** coating technology offers the following benefits for use in **oily and dirty environments**

1st smooth nitrile layer provides resistance to oil

2nd sandy nitrile layer allows a high level of grip

GRIP

- Excellent grip when handling oily parts with or without cut risks
- Prevents the risk of dropping objects
- Reduction in muscle fatigue and risk of RSI (Repetitive Strain Injury)
- Improves productivity

RESISTANCE

- The durable coating allows long-lasting use
- Glove stays clean and effective for longer due to its liquid resistance
- Optimised costs

SKIN PROTECTION

- Impermeable at strategic points
- Protects from irritant oils
- Reduces the wearer's risk of eczema and dermatitis

Thanks to our expertise and reliable use testing, MAPA PROFESSIONAL has designed a range of gloves with or without cut protection, with **GRIP&PROOF** technology for **oily or greasy** environments. This technology is used in our **ULTRANE** and **KRYTECH** ranges.

KRYTECH 574

Aeronautic maintenance

RESICOMFORT TECHNOLOGY

Our **RESICOMFORT** coating technology offers the following benefits for **precise handling** operations in **dry environments**

A layer of foam nitrile provides breathability

A sandy nitrile finish provides greater breathability and resistance

COMFORT AND BREATHABILITY

- Excellent dexterity at fingertips
- Second skin effect
- Suppleness and flexibility
- Breathability: Greater circulation of air protects against sweat

DURABILITY

- Extended use guaranteed by our exclusive process
- Resistance to friction thanks to a highly resistant coating
- Optimised costs

SKIN PROTECTION

- DMF free
- Free from harmful substances
- OEKO-TEX® Standard 100

Thanks to our expertise and reliable use testing, MAPA PROFESSIONAL has designed a range of gloves with or without cutting protection, with **RESICOMFORT** technology for **dry environments**. This technology is used in our **ULTRANE** and **KRYTECH** ranges.

ULTRANE 527

Mechanical maintenance

CHEMICAL PROTECTION

Chemical hazards are not limited to the chemical industry - they are present in **many sectors** like manufacturing, agriculture, healthcare, cleaning, construction, mining, pharmaceuticals and automotive. In these environments, **workers are frequently exposed to substances** that can be more or less aggressive, including **oils, acids, solvents** and other **hazardous chemicals**.

To address these varied risks, Mapa Professional **provides a wide range of protective gloves made from various polymers** - including latex, nitrile, polychloroprene, butyl and fluoroelastomer - each **providing specific protection** based on the end user's needs.

Discover our new chemical glove selection tool
To find the optimal protective glove according to your chemical risk, conditions of use and specific needs.

Try me

THE MAPA GUIDE: 2 PERFORMANCE INDICATORS

To characterise the performance of the elastomers and plastics used to manufacture safety gloves, tests are carried out to determine the behaviour of these materials when confronted with the various families of chemical products.

1. PERMEATION TIME

The permeation time for a given chemical product, i.e. the time taken for the chemical to penetrate the glove, at a molecular level; in some cases, there is no visible deterioration of the glove.

2. DEGRADATION INDEX

The degradation index of the glove in contact with a given chemical product, i.e. the degree of deterioration of the glove shown by an alteration of its physical properties (e.g. softening, hardening, etc.).

SELECT THE MOST APPROPRIATE CHEMICAL GLOVE FOR YOUR NEEDS USING THE THREE STAGES BELOW:

1 Identify which family of chemical products the substance you are handling belongs to ▼			2 Determine the most appropriate protective material for your specific application. ▼			3 Choose your gloves according to the level of protection you require. next pages ▶

RISK
Combination between contact time and the aggressiveness of the chemical being handled.
Choose the performance of your gloves based on the type of risk:

splashes
Chemical substances diluted by immersion or splashes of aggressive substances

frequent contact
Pure or mixed chemical substances in frequent contact

prolonged contact (or immersion)
Pure or mixed chemical substances in frequent contact

2

WEAR TIME
Identifies the comfort level required by the operator.
The longer the wear time, the more comfortable the glove needs to be (perspiration, flexibility/fatigue).

short wear
Chlorinated interior finish

intermittent wear
Flocked interior finish

continuous wear
Fabric-lined interior finish

ultra-comfort wear

CHEMICAL PROTECTION

DISPOSABLE: SOLO - TRILITES RANGE

Mapa Professional offers a variety of **disposable gloves** suitable for different work environments such as cleaning, industrial tasks, and handling chemicals or food. These gloves are made from **different polymers** to enhance **ergonomics**, providing **flexibility, resistance, and comfort**.

DISPOSABLE GLOVES

- There are several advantages of disposable gloves:
- **Excellent dexterity and comfort** for freedom of movement
 - **Protection** for both hands and the products being handled
 - **Rolled cuff** to prevent tearing and keep the glove securely in place
 - **Long cuff** for extra protection

4 ADDITIONAL CRITERIA TO REFINE YOUR CHOICE

1 POLYMERS

- PVC**
Mechanical strength and price.
- LATEX**
Flexibility and comfort.
- NITRILE** (next page)
Mechanical resistance and resistance to oils.
- TRIPOLYMER**
Flexibility, mechanical strength and chemical resistance to splashes.

2 COMFORT AND FLEXIBILITY

- The various interior finishes (powdered/chlorinated) make it possible to adapt to the type of application and the specific requirements of the wearer.
- POWDERED**
Better sweat absorption.
 - CHLORINATED**
Easy donning and no powder on hands.
 - EASY DONNING TREATMENT**
Makes it easier to don and doff gloves, without increasing the thickness and without using powder.
Reduces the allergy risk of natural latex gloves.

3 COLOUR

The use of different colours is in response to the unique demands of certain sectors and it enables visual checks by allocating a specific colour to each application.

4 DIMENSIONS

Choosing the length and thickness of the glove makes it possible to factor in the limitations related to the workstation: dexterity, resistance and forearm protection.

MECHANICAL PROTECTION

HANDLING PROTECTION:

ULTRANE RANGE

Mapa Professional handling range offers protection and comfort for a wide variety of tasks - from precision to heavy duty work - requiring general protection (against abrasion, scratches, snags) without cut risks. Ideal for box handling, assembly and quality control.

PRECISION WORK

The ULTRANE range is designed for fine handling of small, delicate parts, offering:

- Different levels of protection to be adapted to work conditions
- High dexterity especially at fingertips
- Ease of movement (comfort)
- Different service lives to suit every job
- Suitability for diverse environments (dry, wet, oily, greasy, dirty)
- Enhanced grip in slippery conditions

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

- ☒ **dry** and **relatively clean** environments
- ☒ **oily** and **very dirty** environments
- ☒ **wet** environments

2 SERVICE LIFE

The service life of a glove for heavy-duty work is directly linked to the thickness of the polymer layer covering the fabric and to the adhesion and nature of the fabric in a given environment.

- ⌚ **short** service life
- ⌚ **long** service life
- ⌚ **high-performance** service life

MECHANICAL PROTECTION

HANDLING PROTECTION:

TITAN RANGE

Mapa Professional handling range offers protection and comfort for a wide variety of tasks - from precision to heavy duty work - requiring general protection (against abrasion, scratches, snags) without cut risks. Ideal for box handling, assembly and quality control.

HEAVY-DUTY WORK

In heavy-duty environments, users need durable and comfortable gloves that offer enough protection.

TITAN, HARPON, and EXONIT ranges key benefits:

- Easy to don and doff
- Ease of movement and gripping
- Different service lives to suit every job
- Adaptability to different environments (dry, wet, oily, greasy, dirty)
- Superior performance in slippery conditions
- Specific protection depending on the glove (e.g. impact protection)

HOW CAN YOU REFINE YOUR CHOICE?

1

ENVIRONMENT

Select the glove most suitable for your working environment:

dry and relatively clean environments

oily and very dirty environments

wet environments

2

SERVICE LIFE

The service life of a glove for heavy-duty work is directly linked to the thickness of the polymer layer covering the fabric and to the adhesion and nature of the fabric in a given environment.

short service life

long service life

high-performance service life

MECHANICAL PROTECTION

CUT PROTECTION: KRYTECH RANGE

Mapa Professional cut-protection range combines protection against cut hazards with excellent comfort and dexterity. Ideal for tasks involving sharp objects such as metal sheets, blades or glass.

PRECISION WORK

Users in precision work need both cut protection and the ability to handle small and delicate parts.

The KRYTECH range offers:

- Different levels of cut protection to be adapted to work conditions
- High dexterity especially at fingertips
- Ease of movement (comfort)
- Different service lives to suit every job
- Adaptability to various environments (dry, wet, oily, greasy, dirty)
- Superior performance in slippery settings for certain products

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

- ☒ **dry** and **relatively clean** environments
- ☒ **oily** and **very dirty** environments
- ☒ **wet** environments

2 RISK

The higher the level of performance, the greater the glove's resistance to the combined effects of the sharpness of the object's cutting edge and the pressure applied.

- ⚠ **low** risk - ISO B
- ⚠ **moderate** risk - ISO C
- ⚠ **high** risk - ISO D
- ⚠ **very high** risk - ISO E & ISO F

MECHANICAL PROTECTION

CUT PROTECTION: KRYTECH - EXONIT RANGE

Mapa Professional range of cut-protection gloves offer both protection against cut hazards and excellent comfort. Ideal for tasks involving sharp objects such as metal sheets, blades or glass.

HEAVY-DUTY WORK

Mapa Professional KRYTECH and EXONIT heavy duty range offers gloves with cut protection and resistant enough for all types of tasks, ensuring comfort and flexibility for prolonged use.

Key advantages include:

- Different levels of cut protection to be adapted to work conditions
- Easy to don and doff
- Ease of movement and gripping
- Different service lives to suit every job
- Adaptability to diverse environments (dry, wet, oily, greasy, dirty)
- Superior grip in slippery conditions
- Specific protection depending on the glove (e.g. impact protection)

HOW CAN YOU REFINE YOUR CHOICE?

1 ENVIRONMENT

Select the glove most suitable for your working environment:

- ☒ **dry** and **relatively clean** environments
- ☒ **oily** and **very dirty** environments
- ☒ **wet** environments

2 RISK

The higher the level of performance, the greater the glove's resistance to the combined effects of the sharpness of the object's cutting edge and the pressure applied.

- ⚠ **low** risk - ISO B
- ⚠ **moderate** risk - ISO C
- ⚠ **high** risk - ISO D
- ⚠ **very high** risk - ISO E & ISO F

3 SERVICE LIFE

The service life of a glove for precision work is directly linked to the thickness of the polymer layer covering the fabric and the nature of the fabric, in a given environment.

- ⌚ **short** service life
- ⌚ **long** service life
- ⌚ **high-performance** service life

☒ dry and relatively clean ENVIRONMENTS		☒ wet ENVIRONMENTS		☒ oily and very dirty ENVIRONMENTS

MECHANICAL PROTECTION

CUT PROTECTION: KRYTECH RANGE

Mapa Professional offers a range of **cut-protection sleeves** for workstations that require extra protection to **cover the forearm**.

- Key advantages of the SLEEVES include:
- **Extended coverage for the forearm**
 - **Different levels of cut protection** to be adapted to work conditions
 - **Comfortable wear**
 - **Easy donning**

HOW CAN YOU REFINE YOUR CHOICE?

1

ENVIRONMENT

Select the cuff most suitable for your working environment:

☐

dry and **relatively clean** environments

🛢

oily and **very dirty** environments

💧

wet environments

2

RISK

The higher the level of performance, the greater the ability of the cuff to stand up to the combined effects of the sharpness of the cutting edge and the pressure applied.

THERMAL PROTECTION

PROTECTION: HEAT AND COLD

Mapa Professional gloves deliver trusted hand protection across a **wide temperature range**, from heat up to 250°C to sub-zero conditions. Ideal for sectors such as manufacturing, construction, and food processing.

- Key advantages include:**
- **Strong thermal insulation and long-lasting durability**
 - **Ergonomic fit** for enhanced **comfort** during extended wear
 - **Good dexterity** for precision tasks
 - **Versatile solution** for both high-temperature tasks and cold storage operations, combining safety, comfort, and performance.

HOW CAN YOU REFINE YOUR CHOICE?

1

TEMPERATURE

Depending on the temperature of the objects to be handled.

Temperature - **10°C**

Temperature **up to 150°C**

Temperature **above 150°C**

2

ENVIRONMENT

Depending on the environment in which you are working.

wet environments

dry environments

moderately oily environments

chemical environments

3

USAGE DURATION

In cold settings, the duration depends on the intrinsic quality of the coating material. In hot settings, the duration depends on the contact time with the part at a given temperature.

SERVICE LIFE (COLD)

*At 250°C the glove can become stiffer and the color might change, without altering the product performances.

FOOD EXPERT RANGE

Compliance with hygiene rules is an essential requirement in the food industry. The industry invests to continuously improve the safety of its customers, as producers alone are legally liable for the sanitary quality of their products.

European regulations define in great detail the **food contact tests** to be performed for each type of food. Therefore, a glove may be approved for the handling of certain foodstuffs but not others.

Indeed, simply affixing the pictogram to a glove without giving more detailed information does not provide an adequate guarantee of compatibility with a given food.

The flags in this catalogue refer to the regulations for which the glove is certified. If there is one of the national flag, it is also European-certified.

Through its dedicated **food industry selection guide**, Mapa Professional aims to help end users check the food compliance of each glove according to the foods they actually handle, strictly in line with **European and national** regulations.

By providing the test results for all of the gloves in its **Food Expert range**, Mapa Professional aims to meet the strictest requirements of its customers' quality systems.

These tests are available on our website

mapa-pro.com

- SELECT THE RIGHT GLOVE FOR YOU DEPENDING ON THE FOOD HANDLED**
- STEP 1** Find the food you handle using the food groups.
- STEP 2** Identify the gloves suitable for handling this type of food.

- THEN CHECK YOUR GLOVE FOR USE AND COMFORT**
- STEP 3** Turn to the next page to choose the level of protection required (disposable, thermal protection, cut protection, liquid-proof) and the performance required based on your use.

FOOD CONTACT:
YOUR SELECTION GUIDE

- Suitable for contact with this type of food
- If pH > 4.5, suitable for contact with this type of food
If pH < 4.5, unsuitable

FOOD EXPERT RANGE

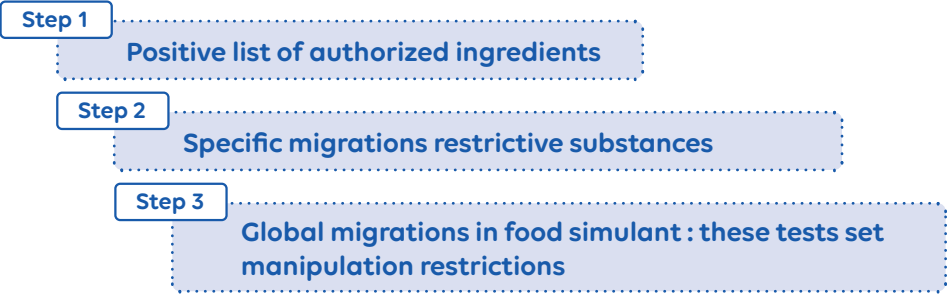

HOW FOOD REGULATION WORKS?

There are 2 types of regulation:

PLASTICS	RUBBER
EU 10/2011 regulation. Ex: PVC, Synthetic textile, Polyurethane.	National laws define test methods to be used to have food compliance.
 France Arrêté du 5/08/2020	 Italy Decreto Ministeriale 21/03/1973
	 Germany BfR XXI, category 3

European food regulation and national laws are based on 3 common principles:

Each step is necessary to get to go to the next step, these are the constraints to obtain the food certification. Mapa Professional guarantees the respect of legislation according to European regulation.

HOW CAN YOU REFINE YOUR CHOICE?

- 1 WEAR TIME
- Identifies the comfort level required by the operator. The longer the wear time, the more comfortable the glove needs to be (perspiration, flexibility/fatigue).
- short wear
(Chlorinated interior finish)
- intermittent wear
(Flocked interior finish)
- continuous wear
(Fabric-lined interior finish)
- ultra-comfort wear
(MAPA exclusive technology providing greater flexibility)

- 2 MATERIAL
- Materials guide for disposable and liquid-proof gloves.
- Natural latex**
Flexibility, comfort and value for money.
- Nitrile**
Strength, durability, handling of oily foods with no risk of allergies.

*At 250°C the glove can become stiffer and the color might change, without altering the product performances.

CRITICAL ENVIRONMENT PROTECTION

Mapa Professional gloves ensure **maximum protection for both operators and sensitive products** by **minimizing contamination risks** and **preserving product integrity**.

Through advanced manufacturing techniques and strict **quality controls**, they meet the demanding **standards of cleanrooms and controlled environments** in industries such as electronics, pharmaceuticals, and biotechnology.

Our range is **ISO Class 5** according to ISO 14644-1:2015, ensuring **compatibility with cleanroom environments** requiring the highest levels of cleanliness.

These gloves delivers the perfect balance between safety, cleanliness, and high performance, tailored for critical applications.

QUALITY GUARANTEED AT EVERY STAGE OF PRODUCTION

- Mapa Professional uses its own post-manufacturing cleaning process and clean rooms to maintain a level of product and packaging quality that meets requirements for cleanliness and sterility.
- All manufacturing sites have ISO 9001 certification.
- The levels of glove cleanliness are tested periodically to ensure that the production quality of these gloves intended for use in critical environments complies with established specifications.
- Each chemical protection glove is tested using appropriate methods to detect any sealing defects so as to maintain operator safety.
- The chemical resistance checks comply with ASTM standards and EN 16523-1:2015, providing users with the information they need to choose a suitable glove for a given application.

YOUR PRIORITIES ARE OUR PRIORITIES

- Improving user effectiveness, productivity and safety by designing gloves that are ever-more effective and safe to use
- Increasing production yields by reducing the amount of contaminants in products
